

Executive Summary: Bahaghari Retail Co. Sales Performance Dashboard

This Power BI dashboard provides an overview of Bahaghari Retail Co.'s sales performance across product categories, geographic locations, and time periods. The analysis highlights key trends that can support management in making data-driven decisions to improve revenue and operational efficiency.

Key Insights

1. Groceries is the company's strongest-performing product category.

The dashboard shows that Groceries generated approximately **27K in sales**, accounting for about **49% of total sales**, making it the largest contributor to overall revenue. In comparison, Personal Care contributed around **13K (24%)**, while Beverages and Snacks contributed significantly lower sales volumes. This indicates that customer demand is strongest for grocery products and that this category plays a critical role in the company's profitability.

2. Luzon records the highest sales among all locations.

Regional sales analysis reveals that **Luzon generated the highest sales at approximately 24K**, followed by **Visayas at around 18K**, while **Mindanao recorded the lowest sales at about 13K**. This suggests that Bahaghari Retail has a stronger market presence and customer base in Luzon. The lower sales performance in Mindanao may indicate opportunities for market expansion, promotional activities, or improvements in product availability.

3. Sales performance fluctuates throughout the year.

The monthly sales trend shows noticeable variations in revenue. Sales peaked at nearly **10K during August 2025**, while a significant decline occurred in **September 2025**, where sales dropped to roughly **1K**. Such fluctuations may be influenced by seasonal demand, promotional campaigns, inventory availability, or external market conditions. Understanding the causes of these peaks and declines can help management improve forecasting and sales planning.

4. Average order value remains relatively strong.

The dashboard reports an **Average Order Value (AOV) of 279**, indicating that customers are making moderately high-value purchases per transaction. Combined with total sales of **56K**, this suggests that revenue growth can be achieved not only by attracting more customers but also by encouraging larger basket sizes through product bundles and cross-selling strategies.
